

For LK1900 series (Computer-controlled bartacking machine)

Shorter-thread remaining kit

S Spec. :40193911

H Spec. :40194944

This simple kit reduces the remaining length of the thread at the end of the sewing process (after thread cutting) which can be attached to all JUKI LK-1900 series^{※1} of products. Shorter-thread remaining function is added to the sewing machine to be used only by replacing needle plates with exclusive parts.

Achieved an average length of remaining thread at the end of sewing of 2.5 mm or less (S spec.). It eliminates the need for thread trimming operation and gives soft and smooth feeling on the bartacking sections where directly contact skin such as underwear and other items.

[Length of remaining thread]

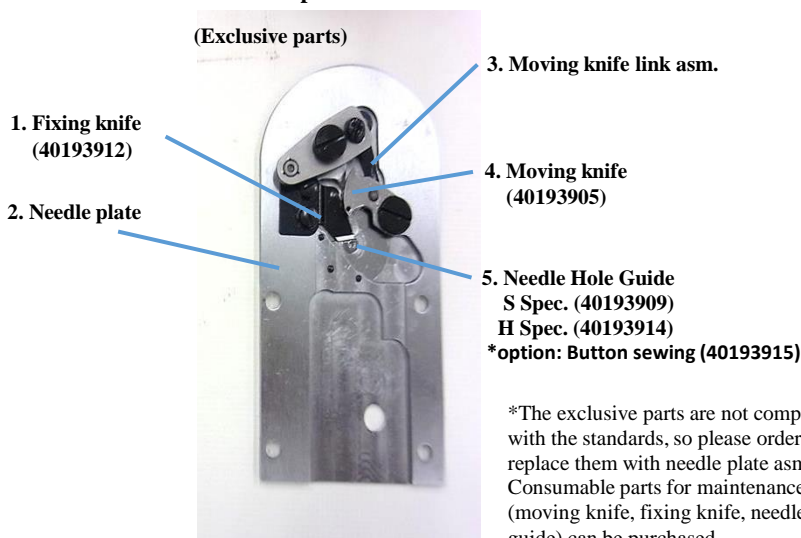

(Standard machine)
About 5 mm

(Exclusive part mounting machine)
Average 2.5 mm or less

**Needle plate asm.
(Shorter-thread remaining)**
S Spec. :40193911
H Spec. :40194944

*The exclusive parts are not compatible with the standards, so please order and replace them with needle plate asm. Consumable parts for maintenance (moving knife, fixing knife, needle hole guide) can be purchased.
